Shaheer Tahir Rao

Electrical Engineer| PEC Registered| xIntern@PEL|
xIntern@NESPAK
Lahore, Punjab, Pakistan

Summary

I'm a PEC-Registered Electrical Engineer (RE) and a graduate of Ghulam Ishaq Khan Institute of Engineering Sciences and Technology (GIKI), with a strong foundation in power systems, control systems, electrical design, and embedded technologies. My engineering journey has given me hands-on exposure to technical projects involving MATLAB/Simulink, PID control, ESP32 and Arduino-based systems, electrical simulations, and hardware development. I particularly enjoy exploring how electrical engineering principles can contribute to the future of mobility, automation, and energy systems. Beyond engineering, I've always had a strong interest in the automotive industry—especially electric and hybrid vehicles—and the technologies shaping the future of transportation. As I begin my professional career, I'm looking to grow through challenging engineering projects, continuous learning, and collaboration with professionals who are passionate about innovation. Areas of interest: # Power Systems & Electrical Engineering # Control Systems & Automation Automotive & EV Technologies Embedded Systems & Microcontrollers MATLAB/Simulink & Engineering Simulation Let's connect if you're interested in engineering, mobility technology, automation, or energy systems.

Experience

National Engineering Services Pakistan (pvt.) Ltd
Electrical Engineering Intern
July 2025 - August 2025 (2 months)
Lahore, Punjab, Pakistan

During my 4-week internship at NESPAK, I gained hands-on experience in designing and implementing smart infrastructure and security solutions. I contributed to:

1. Safe City Projects in Dasu and Basha, supporting the development of surveillance, communication, and control systems.
2. Smart Infrastructure Setup for a 200-bed Gynaecology Ward in Islamabad, assisting in the integration of SCADA and telecom systems for efficient hospital operations.
3. Reviewing WAPDA's Society Development Regulations and Consultants' By-Laws, along with interpreting comprehensive reports and AutoCAD drawings to understand standards and design practices.

This experience enhanced my technical understanding of SCADA, telecom, and infrastructure development, while also strengthening my collaboration and project management skills.

Pak Elektron Limited

2 months

Electrical Engineering Intern

July 2024 - August 2024 (2 months)

Lahore, Punjab, Pakistan

Gained hands-on experience in the design and operation of low- and medium-voltage switchgear systems.

Developed proficiency in AutoCAD, completing two technical projects:

1. Designed a Star-Delta Motor Control Scheme, detailing three-phase connections and control logic.
2. Created a Single Line Diagram (SLD) for a switchgear panel, illustrating power flow and protection layout.

Assisted senior engineers with panel layout reviews, wiring checks, and schematic evaluations.

Enhanced understanding of electrical protection, circuit breakers, contactors, and relays within industrial applications.

Quality Assurance Intern

July 2024 - August 2024 (2 months)

Assisted with schematic reviews and basic parameter checks for CT/VT, relays, interlocks, and earthing. Assisted with switchgear documentation and drafting, including verifying basic panel ratings (voltage/current) from nameplates and drawings. Submitted 2 AutoCAD deliverables: Star-Delta motor starter/protection schematic and a switchgear technical drawing.

Education

Ghulam Ishaq Khan Institute of Engineering Sciences and Technology

Undergraduate , Electrical Engineering Power · (January 2022 - May 2026)

Government College University (GCU), Lahore

Intermediate , Pre-Engineering · (August 2019 - August 2021)
